Open to Internship Opportunities

TECHNICAL SKILLS

Languages Python, C++,
JavaScript/TypeScript, Dart, x86 Assembly

Web React, Next.js, Three.js / R3F,
Tailwind CSS

Mobile Flutter

Backend & Databases FastAPI, Node.js,
Supabase, Firebase, Oracle DB, SQLite

AI / ML scikit-learn, NumPy, pandas —
classification, regression, genetic
algorithms, A* search, Q-learning

Security & Auth JWT, AES-256, RBAC,
bcrypt

Systems & Networking Windows Server
VM configuration, GPO & access-policy
management

Platforms & Tools Git, Shopify,
WordPress

EDUCATION

BS Information Technology
Bahria University, E-8, Islamabad
Sep 2023 – Present | CGPA 3.1/4.0
6th Semester

Pre-Engineering (Intermediate)
FG Sir Syed College, Rawalpindi
Aug 2019 – Jun 2021

LANGUAGES

Urdu — Native
English — Fluent

IT undergraduate (6th semester) with hands-on experience across web and mobile development, applied AI/ML, databases, and systems/network administration. Built eight independent projects spanning full-stack apps, AI algorithms, and security, and completed a frontend development internship.

WORK EXPERIENCE

Frontend Development Intern | New Web Order, Rawalpindi Jun – Aug 2025

- Built responsive, interactive UI features in React.js, Next.js, and Tailwind CSS across multiple client projects.
- Implemented Supabase-backed database and authentication flows to support full-stack feature delivery.
- Collaborated with the development team to ship new features and optimize application performance.
- Strengthened full-stack development and debugging skills while adapting to real-world, production-level project workflows and code reviews.

PROJECTS

Aero-Grid — AI Drone Delivery Simulator

6th Semester

github.com/Nobody243/aero-grid

Solo-built full-stack simulator implementing 4 AI techniques (Naive Bayes weather classification, Genetic Algorithm route optimization, A* search, Q-Learning) to plan and execute autonomous drone delivery on a 40x40 grid. Stateless FastAPI backend paired with a Next.js/React Three Fiber frontend rendering live 2D/3D decision steps, chromosome-evolution curves, and Q-table heatmaps.

FOLIO — Clothing Aggregator & Search

6th Semester

github.com/Nobody243/folio

Concurrent web-scraping pipeline (Python/FastAPI) aggregating live catalogs from multiple clothing brands, with fault-tolerant handling across 3 distinct failure modes so a blocked brand never crashes the run. SQLite + FTS5 index enables fast in-memory full-text search, plus Prometheus-ready health monitoring per scraper.

P2P USDT Trading Platform

github.com/Nobody243/quick-usdt

Independent fintech project (Next.js, Node.js, Supabase) — designed and built the peer-to-peer trade listing/matching UI, including order-book layout and trade-status flow. Frontend fully functional; backend built to prototype stage, never deployed to production.

Encrypted Password Manager

5th Semester

React + Firebase credential manager using AES-256 encryption for secure storage and retrieval, built for an Information Security course to practice applied cryptography and secure data handling end-to-end.

HMS Pro — Hospital Management System

5th Semester

Role-based system (Next.js 16 + Oracle DB) with 3 dedicated portals for admins, doctors, and patients. Built a pooled, parameterized database access layer and JWT cookie-based authentication with RBAC middleware, powering payroll, asset, vendor, and clinical record workflows in a responsive UI.

ClashChat — AI Debate Mobile App

6th Semester

Flutter app enabling real-time, structured debates against an AI opponent, backed by Firebase Auth and Firestore persistence. Shipped 10+ screens with custom UI (animated circular score arc, multi-theme system), 24-hour session management, and full post-debate score analytics.

Course Academy Platform

github.com/Nobody243/cs-academy-1

Independent project (Next.js, Supabase) — built the course catalog, search/browsing, and enrollment-flow frontend for an online academy concept, backed by a Supabase data layer for courses and user progress.

Server & Policy Configuration

5th Semester

Configured a Windows Server VM with GPO-based access policies, user roles, and permission structures as part of a Networking/System & Network Administration (SNA) course project.
